Assignment 5 – Test Summary

I tested each class in the `okonkwo` package. Some of the problems I encountered during the testing phase included failing to read empty text files in `FileHandler.fileText()`, the `LinkedList` iterator not working properly (failing to start at the head of the list, instead starting at the second element), exceptions in trying to remove the head and tail of the list, and failing to calculate the standard deviation properly (population vs sample standard deviation). In each case, I needed to rework my code and parts of the test methods.
